**FT400  
Series**

01/09

**The FT400 Retro-fit makes it simple and cost effective to upgrade your school's lighting, save energy and reduce your carbon footprint.**

Many schools in Essex, Hertfordshire and the Home Counties have Fluorel Lighting surface light fittings installed. Some of these installations have been operating for over 30 years. However, we recognise that over this time components wear out, diffuser covers may yellow or damage may have been sustained and the fittings may well be in need of replacement or repair.

Technology has brought many advances over the last few years, most notably the introduction of T5 fluorescent lamps and electronic control gear which offer lower energy consumption, reduced running costs and improved performance.

So, if you have been informed that you face a costly light fitting replacement programme, then think again. Fluorel Lighting offers you the facility to upgrade your lighting and save energy without some of the usual associated costs.

If you want to see an end to flickering lamps, buzzing noises and endless flashes before the light finally comes on and would prefer energy efficient instant starting and new bright diffuser covers then Fluorel Lighting can help.

We offer new fully wired and tested gear trays complete with T5 lamps and electronic control gear and a new diffuser cover to fit on the existing light fitting body fixed to the your ceiling. This avoids damage to the

ceiling, no disruption to the school wiring and the kits can usually be easily fitted and connected by qualified personnel in shorter time than a complete replacement.

We can include emergency lighting and dimmable controls if required.

#### **Benefits:**

- Energy saving
- Lower running costs
- Improved efficiency
- Flicker free
- Instant starting
- Silent running
- New diffuser covers
- Lower installation costs
- No 'making good' or redecorating costs for the ceiling

**Call us today on 020 8504 9691 to arrange a no-obligation free of charge survey to see if we can help you – what do you have to lose?**
